1.Project Overview

Project Name: HireIQ — Intelligent CV Screening & Skill Assessment Platform

Project Goal: To develop a secure, AI-powered web platform that enables any user to publicly browse job postings, post job vacancies, and automatically screen applicants through role-specific AI-generated quizzes and a hybrid NLP-based CV ranking engine combining TF-IDF and BERT semantic similarity, enabling job posters to identify the most qualified candidates efficiently and objectively across any industry.

Project Supervisor: Ms. Ann Roshanie Appuhamy

#	Student Name	Student No.	Program	Email
1	Kuruppu Mudalige Tharaka Madusha Kuruppu	10675270	Bachelor of Computer Science (Cyber Security)	kuruppuk@our.ecu.edu.au
2	Asvin Fernando	10675493	Bachelor of Computer Science (Cyber Security)	ASVINF@our.ecu.edu.au
3	Yapa Appu Hamilage Don Vishwa Shiwanka Jayasinghe	10675273	Bachelor of Computer Science (Cyber Security)	YJAYASIN@our.ecu.edu.au

5	HEWA KIRINDAGE Vinuka Janandith Rathnayake	10685113	Bachelor of Computer Science (Cyber Security)	VHEWAKIR@our.ecu.edu.au

Table 1 : Team Details

2.Background

The current recruitment world is facing a dire situation of efficiency crisis. Studies by TheLadders (2012) show that an average recruiter spends 6 seconds to look at a particular resume at an initial stage; however, a significant percentage of those applications are sifted before a hiring manager. This shallow, quick screening creates a paradox, where large numbers of unqualified applicants flood the human resources departments, whilst really talented applicants are usually lost due to inconsistent and subjective screening techniques by human resources.

This problem is significant. The Society of Human Resource Management (SHRM) estimates it to be about 17,000 $ on average to make a poor hire, whereas the time it takes to complete a single vacancy is 42 days on average (SHRM, 2022). The hiring process may be significantly extended in technical sectors with high demand (software engineering, data science, and cybersecurity). According to the ISC2 Cybersecurity Workforce Study (2023), it is estimated that around the world, there exist 3.5 million cybersecurity specialists, so there is a strong need to implement faster and more precise screening systems to match talent with roles.

The traditional Applicant Tracking Systems (ATS) used by over 98 % of the Fortune 500 companies (Jobscan, 2023) are based on inflexible keyword matching that does not measure competence of a job applicant. A study conducted at Harvard Business School revealed that 88% of employers also recognize that their ATS automatically excludes qualified applicants only due to the lack of precise keyword patterns in their CVs, a process known as the hidden worker problem (Fuller et al., 2021). This is therefore a systematic lockout of competent candidates by the employers based on tooling limitation instead of actual skills gap.

In addition to the accuracy of screening there is the growing concern of assessment integrity. In a 2023 survey released by the talent assessment company HireVue, 52% of recruiters said that they had encountered candidates who lied about their skills on their CVs, and 38 % of recruiters said that an applicant had been coached in advance on standard interview questions (HireVue, 2023). Without a goal, tamper-resistant skills checking measure early into the recruitment pipeline, organizations run the risk of propelling the wrongly qualified or dishonest applicant to an expensive and time-sensitive interview.

These are the challenges that HireIQ is dealing with. The platform replaces the subjective manual screening process with a reproducible, data-driven pipeline, enforced server-side with anti-cheating measures, and with an anti-cheating hybrid NLP-based CV ranking engine (TF-IDF + BERT semantic similarity) which can be applied to any job role and industry. The result is a more expedited, unbiased and precise first round evaluation procedure that costs less, lowers recruiter load, and reveals the most truly qualified applicants.

3.Project Scope

3.1 Proposed Work

HireIQ is a full-stack web site that integrates the totality of the recruitment pre-screening experience, inclusive of public job browsing, authenticated job posting, AI-based quiz-based assessment, secure, curricula vitae (CV) uploading of qualified applicants, a hybrid natural language processing (NLP)-based CV ranking system, and a structured recruiter dashboard. The system is designed to accommodate any job position and sector with AI generated content being dynamically tailored to fit the description of the specific job.

3.2 In-Scope Features

1. Public job listings homepage with search and filter by title, location, and job type, no login required to browse view.
2. Authentication is performed using Google OAuth 2.0, cross-site request forgery (CSRF) state token verification is used to prevent the loss of the session, and the user is allowed to register without going through steps of manual registration.
3. Authenticated users can post job vacancies with title, company, description, location, job type, and required skills.
4. AI quiz generation (Google Gemini 2.5 Flash) of 15 questions per job posting, each applicant receives a randomized selection of 15 with shuffled answers.

5. The quiz has a time limit of five minutes on the server which is strictly observed; otherwise the submissions beyond the time-limit are rejected and scored zero.
6. Tab-switch detection during quiz 3 switches trigger automatic submission.
7. Server-side quiz scoring correct answers are never transmitted to the frontend.
8. CV upload pipeline gated behind a passing quiz score (12/15 or above), with retry limits and cooldown timers.
9. Each PDF CV upload is checked through a complete six-tier security validation pipeline, which makes sure that all the data uploads meet the data integrity and privacy criteria.
10. TF-IDF keyword matches scoring (32% weight) and BERT semantic similarity scoring (48% weight) per CV against the job description. (Combined hybrid ranking formula: Quiz 20% + TF-IDF 32% + BERT 48%.)
11. TF-IDF keyword matches scoring (32% weight) and BERT semantic similarity scoring (48% weight) per CV against the job description. (Combined hybrid ranking formula: Quiz 20% + TF-IDF 32% + BERT 48%.)
12. Gemini 2.5 Flash generates a plain English explanatory narrative of every applicant, falling back to rule-based content availability.
13. Real-time WebSocket ranking progress for live scoring updates as CVs are processed.
14. Resume viewer with dual-layer keyword and semantic sentence highlighting.
15. CSV export of full applicant rankings including quiz scores.

3.3 Out-of-Scope Features

1. The system will not integrate with physical hardware devices such as webcams, biometric scanners or any external IoT/HR hardware.
2. The system will not comply with enterprise-level regulations such as full GDPR/CCPA audits or ISO 27001 certification processes.
3. The system will not include monetization or commercial features such as job ad marketplaces or advertising integrations.
4. The system will not implement deep behavioral fraud detection such as keystroke dynamics, mouse movement analytics or webcam proctoring.
5. The system will not support multiple languages (English only in this version.)
6. The system will not connect to external corporate systems such as HRIS, LDAP/Active Directory or payroll/ERP platforms.

3.4 Deliverables

#	Deliverable	Description	Due Date
01	Project Proposal Draft	Initial project proposal drafts following assignment and supervisor instructions, including scope, requirements, and team structure.	14 Mar 2026
02	Project Proposal Report	Final project proposal document with supervisor approval submitted as a PDF following CSG3101 assignment instructions.	16 Mar 2026
03	System Architecture Diagram	Visual depiction of system components, data flows, AI pipeline, WebSocket integration, and security layers as a digital PDF file.	31 Mar 2026

04	HireIQ Web Platform	Fully functional web application covering public job listings, authenticated job posting, AI quiz assessment, CV upload, hybrid ranking, and HR dashboard built using Flask and HTML/CSS/JS.	04 May 2026
05	Source Code Repository	Complete codebase with version history and inline comments for all system components including frontend, backend, AI modules, and security pipeline shared as a GitHub repository (Link).	04 May 2026
06	VAPT Report	Vulnerability assessment and penetration testing report covering authentication, quiz integrity, file upload security, and API endpoints using OWASP ZAP documented as a PDF.	04 May 2026
07	Security Testing Report	Results of security audits, quiz anti-cheat testing, PDF security pipeline testing, and rate limiting validation documented as a PDF.	04 May 2026
08	System Testing Report	Summary of all unit, integration, and performance testing phases and results including BERT inference speed and concurrent user testing documented as a PDF.	11 May 2026
09	User Manual	Step-by-step guide for job posters and applicants covering all key workflows including posting jobs, taking quizzes, uploading CVs, and viewing rankings documented as a PDF.	11 May 2026
10	Developer Manual	Comprehensive technical documentation covering system architecture, API references, NLP model documentation, deployment guide, and maintenance procedures documented as a PDF.	11 May 2026
11	Project Presentation	Presentation and live demonstration showing HireIQ objectives, AI pipeline, system features, quiz results, and ranking outputs.	04 May 2026
12	Final Project Outputs Report	Formal report summarising the scope, design, AI pipeline implementation, testing results, evaluation against all requirements, and future improvements documented as a PDF.	11 May 2026

Table 2: Project Deliverables

4.Schedule (Work Breakdown Structure (WBS)

Project Schedule (WBS)

Task #	Task Name	Required Resources	Deadline	Responsible Person
1.0	**Project Initiation & Proposal (28 Feb – 16 Mar 2026)**			
1.1	Team formation, brainstorming & project idea finalisation	MS Teams, WhatsApp	28 Feb 2026	All Members
1.2	Define goals, gather FRs & NFRs, allocate team roles	MS Word, MS Teams	07 Mar 2026	All Members
1.3	Email supervisor, draft scope and feature list	MS Word, ECU Email	06 Mar 2026	Tharaka, Asvin
1.4	Set up communication channels and GitHub repository	MS Teams, GitHub, Whatsapp	06 Mar 2026	Vishwaa, Asvin,Tharaka
2.0	**Analysis (04 Mar – 16 Mar 2026)**			
2.1	Supervisor meetings — draft proposal review & feedback	MS Teams	09 Mar 2026	All Members
2.2	Use case diagram, user stories and feasibility study	Draw.io, MS Word , Lucidchart	13 Mar 2026	Asvin, Vinuka, Tharaka
2.3	Research AI models, quiz anti-cheat and risk analysis	Research papers, Online	14 Mar 2026	Asvin, Sehan
2.4	Gantt chart creation, proposal writing and final review	MS Excel, MS Word	15 Mar 2026	All Members
M1	***Proposal Submission***	PDF	16 Mar 2026	All Members
3.0	**System Design (15 Mar – 31 Mar 2026)**			
3.1	System architecture, data flow and MongoDB schema design	Draw.io, Lucidchart	20 Mar 2026	Asvin, Sehan, Tharaka
3.2	REST API endpoint design and documentation	Swagger, MS Word	23 Mar 2026	Asvin, Sehan
3.3	UI/UX wireframes — homepage, quiz, HR dashboard	Figma	31 Mar 2026	Vinuka, Vishwaa
3.4	Security architecture and AI pipeline design	MS Word, Draw.io	30 Mar 2026	Sehan, Asvin
4.0	**System Development (23 Mar – 30 Apr 2026)**			
4.1	Flask setup, MongoDB, Google OAuth 2.0 and JWT authentication	Flask, Python, MongoDB	05 Apr 2026	Tharaka, Sehan
4.2	Public HTML homepage, job posting CRUD and login redirect	HTML, CSS, JS, Flask	11 Apr 2026	Vishwaa, Asvin, Vinuka
4.3	AI quiz engine — Gemini generation, timer, scoring, retry logic	Gemini API, Flask, JS	20 Apr 2026	Asvin, Tharaka
4.4	CV upload with 6-layer security pipeline and text extraction	PyMuPDF, bleach, Flask	25 Apr 2026	Sehan, Tharaka
4.5	NLP ranking engine — TF-IDF, BERT, spaCy and Gemini explanation	scikit-learn, HuggingFace	29 Apr 2026	Asvin, Vinuka
4.6	HR dashboard, WebSocket live ranking, CV viewer and CSV export	HTML, JS, flask-sock	02 May 2026	Vishwaa, Sehan
5.0	**Testing & QA (25 Apr – 04 May 2026)**			
5.1	Unit and integration testing — Flask APIs and pipeline	pytest, Postman	03 May 2026	Vinuka, Tharaka
5.2	Frontend HTML/JS cross-browser testing	Browser DevTools	02 May 2026	Vishwaa
5.3	VAPT — OWASP ZAP security scan, quiz anti-cheat and PDF testing	OWASP ZAP, pytest	03 May 2026	Sehan, Vinuka
5.4	Performance testing, bug fixes and presentation preparation	pytest, PowerPoint	04 May 2026	All Members
M2	***Project Presentation***	PowerPoint	04 May 2026	All Members
6.0	**Documentation & Delivery (01 May – 10 May 2026)**			
6.1	User guide and developer / technical manual	MS Word	07 May 2026	Vinuka, Vishwaa
6.2	VAPT report and system architecture documentation	MS Word	09 May 2026	Sehan
6.3	Final report writing	MS Word	10 May 2026	All Members
7.0	**Evaluation (05 May – 11 May 2026)**			
7.1	Evaluate system against all FRs and NFRs	MS Word, System	09 May 2026	Vinuka, Sehan
7.2	Analyse AI scoring, quiz effectiveness and identify limitations	MS Word, Python	10 May 2026	Asvin, Vinuka
7.3	Write evaluation section for final report	MS Word	11 May 2026	Vinuka, Sehan
8.0	**Project Closure (02 May – 11 May 2026)**			
8.1	Code cleanup, README, GitHub final commit — v1.0	VS Code, GitHub	11 May 2026	Tharaka, Sehan
8.2	Archive project files, team debrief and final submission	OneDrive	11 May 2026	All Members
M3	***Final Project Outputs***	GitHub ,PDF	11 May 2026	All Members

Figure 1 : Schedule

5.Team Capability Alignment

Student Name	Enrolled Course	Role	Key Tasks	Tasks Aligned with Course Learning Outcomes
Kuruppu Mudalige Tharaka Madusha Kuruppu (10675270)	B.Sc. Computer Science (Cyber Security)	Project Manager / Backend & DevOps Engineer	• Plan and coordinate project deliverables and timeline. • Manage GitHub repository and project structure. • Configure Flask deployment environment. • Lead sprint planning and risk management	• Apply project management techniques to coordinate tasks and manage risks. • Use backend and cybersecurity skills to design secure Flask API architecture.
Tasks Aligned with Gantt Chart	1.1, 1.5, 1.8, 1.9, 1.10, 2.12, 2.13, 4.1, 4.3, 4.5, 4.14, 4.18, 5.4, 8.1, 8.2, 8.3			
Asvin Fernando (10675493)	B.Sc. Computer Science (Cyber Security)	AI / NLP Engineer	• Design and implement TF-IDF and BERT hybrid scoring pipelines. • Integrate Gemini 2.5 Flash for quiz generation and LLM explanations. • Build spaCy NER skill gap analysis module.	• Apply AI and machine learning techniques to build the hybrid NLP scoring engine. • Ensure AI outputs do not expose sensitive candidate data.
Tasks Aligned with Gantt Chart	2.9, 3.9, 4.11, 4.12, 4.26, 4.27, 4.28, 4.29, 4.30, 4.31, 4.32, 5.8, 7.3			
Yapa Appu Hamilage Don Vishwa Shiwanka Jayasinghe (10675273)	B.Sc. Computer Science (Cyber Security)	Frontend Developer	• Build all HTML/CSS/JS pages including homepage, quiz interface and HR dashboard. • Implement tab-switch detection and countdown timer. • Create dual-layer CV highlighting.	• Apply web development principles to build responsive and accessible interfaces. • Ensure frontend pages do not expose sensitive data or allow client-side manipulation
Tasks Aligned with Gantt Chart	3.5, 3.6, 4.7, 4.8, 4.13, 4.15, 4.33, 4.34, 4.35, 5.3, 6.1			
HETTIARACHCHIGE DON Sehan Denuka Hettiarachchi (10637777)	B.Sc. Computer Science (Cyber Security)	Full-Stack & Security Engineer	• Implement Google OAuth 2.0 and JWT token system. • Design and build the 6-layer PDF security pipeline. • Configure rate limiting and conduct VAPT using OWASP ZAP.	• Apply cybersecurity principles from the Network Security and Ethical Hacking units to implement authentication and penetration testing. • Use cryptography knowledge to implement JWT and HTTPS/TLS.
Tasks Aligned with Gantt Chart	3.8, 4.2, 4.3, 4.4, 4.19, 4.20, 4.21, 4.22, 4.24, 4.36, 5.5, 6.3, 7.1, 7.2			

HEWA KIRINDAGE Vinuka Janandith Rathnayake (10685113)	B.Sc. Computer Science (Cyber Security)	Documentation & Testing Specialist	• Write user guide, developer manual and final report. • Execute unit and integration test cases using pytest. • Evaluate system against all FRs and NFRs.	• Apply software testing techniques to design and execute comprehensive test plans. • Use technical writing skills to produce clear documentation aligned with industry standards.
Tasks Aligned with Gantt Chart	2.7, 2.8, 2.14, 2.15, 4.27, 4.35, 5.1, 5.6, 5.7, 6.4, 7.5, 7.6, 8.3			

Table 3 : Team Capability Alignment

6.Tools and Technical Requirements

Category	Tools / Technologies	Purpose / Justification	Access Method
System Design & Prototyping	Draw.io, Lucid chart	Designing system architecture diagrams, data flow diagrams, UI/UX wireframes and component layouts for the HireIQ platform.	Draw.io, Lucidchart (free)
Frontend Development	HTML, CSS, JavaScript	Building all public-facing pages including job listings homepage, quiz interface, HR dashboard and resume viewer.	VS Code (free)
Backend Development	Python, Flask, flask-sock	Developing REST API endpoints, WebSocket live ranking feed and all server-side business logic.	VS Code, Python.org (free)
Database	MongoDB, PyMongo	Storing users, job postings, quiz attempts, CV data and AI scores in a flexible NoSQL database.	MongoDB Atlas free tier / local install
Authentication & Security	Google OAuth 2.0, JWT (PyJWT), Flask-Limiter, bleach	Implementing secure login, access token management, rate limiting on API endpoints and XSS input sanitisation.	Google Cloud Console (free), PyPI (free)
AI & NLP	Python, scikit-learn, HuggingFace BERT (all-MiniLM-L6-v2), spaCy, NLTK	TF-IDF scoring, BERT semantic similarity, skill gap analysis and text preprocessing.	Python (free) PyPI (free), HuggingFace (free)
AI & Data Processing	Jupyter Notebook, NumPy	Researching, experimenting with and evaluating NLP models for TF-IDF and BERT scoring before integration.	Anaconda / VS Code (free)
AI Quiz & LLM	Google Gemini 2.5 Flash API	Auto-generate quiz questions and produce plain-English recruiter explanations	Google AI Studio (API key required)
File Processing & Security	PyMuPDF (fitz), python-magic	PDF text extraction, deep structural scan and XSS input sanitisation	PyPI (free)
Security Testing	OWASP ZAP, Postman, pytest	VAPT, API endpoint testing and unit/integration testing	OWASP ZAP (free), Postman (free tier)

Web Server & Security Headers	Nginx, HTTPS / TLS 1.2+	Serving the React frontend, reverse proxying to Flask, enforcing HTTPS and applying security headers (HSTS, CSP, X-Frame-Options).	Open source (free)
Version Control	GitHub / Git	Source code management and team collaboration	github.com (free)
Project Management	Microsoft Teams, Microsoft OneDrive	Team meetings, sprint planning and document sharing	MS Teams and MS OneDrive account
Documentation	MS Word	Proposal, user guide, developer manual and API reference	MS Office and pdf

Table 4 : Tools and Technical Requirements

7.Possible Future Improvements

- Development of a native mobile application for Android and iOS to allow candidates to browse jobs, take quizzes and track application status on mobile devices, with push notifications for job posters when new CVs are submitted.
- Expansion to support skills-based hiring through dynamic skill graphing, automated upskilling resource suggestions for candidates with identified gaps, and AI-generated personalized job recommendations based on a candidate's existing skill profile.
- Development of a predictive hire success scoring model trained on historical hiring outcomes to forecast a candidate's long-term performance in a role beyond the initial CV and quiz assessment.
- Addition of a practical skills assessment module supporting role-specific coding challenges, scenario-based tasks and short-answer questions with AI evaluation, allowing job posters to verify hands-on technical ability before progressing candidates to final interviews.

Appendix

Appendix A

1. Functional Requirements

1.1 User Functional Requirements

#	Requirement	Category
1	Users must be able to browse and view all job postings on the homepage without logging in.	Access
2	Users must be able to search and filter jobs by title, location, and job type on the homepage.	Search & Filter
3	When visitors click Apply or Post a Job, the system must redirect them to the login page then return them to their intended action after login.	Authentication
4	Users must be able to login via Google OAuth 2.0 with CSRF state token validation; no manual registration required.	Authentication
5	Any logged-in user must be able to post a job with title, company, description, location, job type, and required skills.	Job Posting
6	Any logged-in user must be able to apply for any job posted by another user; a user must not be able to apply for their own posting.	Application
7	When a logged-in user clicks Apply, the system must present a 10-question MCQ quiz that the applicant must complete before submitting a CV.	Quiz
8	Applicants must be able to navigate between quiz questions and submit their answers within the allotted time.	Quiz
9	Applicants scoring 12 or above out of 15 must be granted access to the CV upload page for that specific job.	Quiz
10	Applicants scoring below 7 must be shown a 24-hour retry countdown with a maximum of 2 attempts per job per user.	Quiz
11	Applicants must be able to upload their CV in PDF format after passing the quiz for that job.	CV Upload
12	Applicants must be able to view their own application status per job: Quiz Passed, CV Uploaded, or Under Review.	Status Tracking
13	Job posters must be able to view all applicants for their own posting ranked by the combined hybrid score, including quiz score, tab switch count, AI scores, skill gaps, and AI explanation.	Recruiter View
14	Job posters must be able to view individual CV content with dual-layer highlighting: green for matched skill keywords and yellow for BERT-matched sentences.	Recruiter View
15	Job posters must be able to export all applicant rankings including quiz scores as a downloadable CSV file.	Recruiter View

Table 5: User Functional Requirements

1.2 System Functional Requirements

#	Requirement	Category
1	Job listings must display title, company, location, job type, and a short description preview on the public homepage.	Display
2	The system must automatically generate a 10-question MCQ quiz using Google Gemini 2.5 Flash based on the job description and industry when an applicant clicks Apply.	Quiz Generation
3	Gemini must generate 20 questions per job; each applicant must receive a randomized selection of 15 with shuffled answer options so no two applicants see the same quiz.	Quiz Generation
4	The quiz must enforce a server-side 10-minute timer; submissions received after 300 seconds must be rejected and scored zero regardless of frontend state.	Quiz Enforcement
5	The system must detect and record tab switches during the quiz; 3 switches must trigger automatic quiz submission with the current answers.	Quiz Enforcement
6	All quiz answers must be scored entirely on the server side; the correct answers must never be transmitted to the frontend at any point.	Security
7	Every uploaded PDF must pass through a mandatory 6-layer security pipeline before being written to disk.	Security
8	The system must automatically extract full text from uploaded PDFs using PyMuPDF at upload time and store it in MongoDB.	CV Processing
9	The system must rank uploaded CVs based on quiz performance and semantic similarity between the CV and job description.	Ranking
10	The system must identify matched and missing skills from each CV relative to the job description.	Analysis
11	The system must generate a plain-language explanation summarizing each applicant's strengths and skill gaps.	Analysis

Table 6:System Functional Requirements

2.Non-Functional Requirements

#	Requirement	Category
1	AI models must be loaded once at system startup to prevent repeated initialization and improve performance.	Performance
2	BERT inference per CV must be completed within 10 seconds on CPU hardware without requiring a GPU.	Performance
3	The public job listings homepage must be loaded within 3 seconds for up to 500 active job postings.	Performance
4	The quiz timer must be enforced server-side, the frontend countdown is visual only and cannot be manipulated to extend the allowed time.	Security
5	PDF uploads must be rejected if file size exceeds 5MB, if extracted text is fewer than 50 characters, or if extracted text exceeds 50,000 characters.	Security

6	All protected API routes must require a valid JWT token, and the unauthenticated requests must receive HTTP 401 and authenticated users accessing others' resources must receive HTTP 403.	Security
7	API endpoints must implement rate limiting to prevent abuse and denial-of-service attempts.	Security
8	All production traffic must be served over HTTPS TLS 1.2 or higher — HTTP requests must automatically redirect to HTTPS.	Security
9	Quiz submission must be rate-limited to 5 requests per minute per IP, login to 3 per minute, and job posting to 10 per hour per account using Flask-Limiter.	Security
10	The quiz interface must clearly display the remaining time, current question number, and tab switch warnings in real time throughout the attempt.	Usability
11	All MongoDB operations must be wrapped in try/except with safe return values the raw exceptions and stack traces must never be exposed to the frontend.	Reliability
12	The system must achieve at least 99% uptime during demonstration and testing phases.	Reliability
13	All credentials and API keys must be securely stored outside the source code and must not be hardcoded.	Security

Use Case Diagram

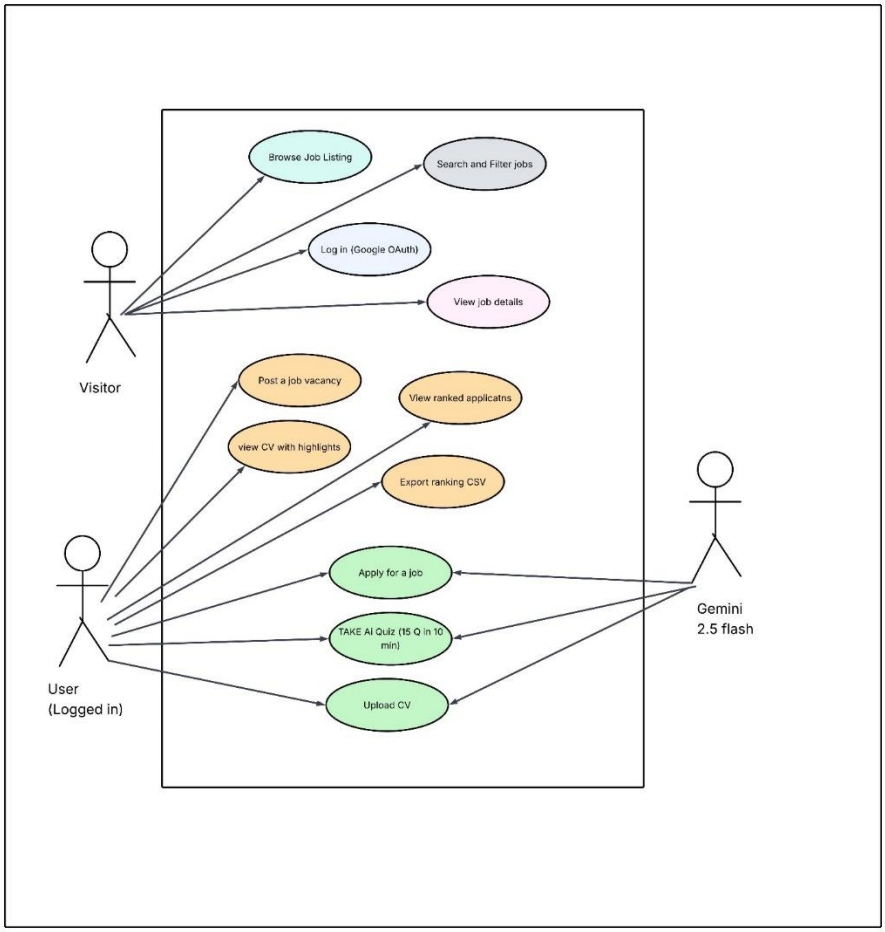

Figure 2 : Use Case Diagram

Group Contract

1. The subject matter of this contract

This contract is entered into by the students named below for the purpose of ensuring that each individual group member fulfills his/her obligations for completing the group assignment for the unit CSG3101 Applied Project.

2. The consideration

1. All group members will be punctual at meetings.
2. All group members should attend meetings unless by prior agreement with the group.
3. All group members will stay at the meeting until it is agreed that the meeting is adjourned.
4. All group members will agree to a specific day/time for each weekly meeting and an agreed procedure for informing all other members prior to any missed meetings.
5. All group members will come to the meetings prepared by completing the agreed tasks on time.
6. The group will actively seek the contributions and opinions of each member at meetings and during group discussions.
7. Each group member will take turns at both listening and talking.

8. Dominating the group's discussion and decision making is not acceptable.
9. Group members will take turns in writing down minutes of the meeting.
10. The group member taking minutes will record allocated tasks to be completed by group members by name and agreed deadlines for task completion.
11. The group members must decide and declare which method of communication is to be the preferred and agreed method (i.e., MS Teams, ECU email, face-to-face.
12. The group members must decide on an auditable and verifiable method of detailing completed tasks and or individual elements. (i.e., Google groups, tasks management, written master file)
13. Work allocation will be according to an agreed procedure and is documented below *(insert method of breaking down the assignment and allocation of work to group members).*
14. Where disputes arise regarding the work tasks or agreed behaviors in which a group member is not performing according to the terms of this agreement, the following process will be entered into to resolve the dispute: *(insert the dispute resolution procedure for your group*). Disputes must be resolved within the group and documentation must be retained that relates to attempts to resolve a dispute or to encourage a group member to make his or her contribution to the assignment).
15. Ejection of a non-performing or disruptive group member. The Contract MUST include a specific method for dealing with group members where the performance of the group is affected.

3. Names and signatures of the parties to this Group Contract

Student signature	Student name (printed)	Student Number	Date
	Kuruppu Mudalige Tharaka Madusha Kuruppu	10675270	15/03/2026
